

***PL-SBOX-22"* Panel Light Softbox User Manual**

Thank you for choosing iFootage. This manual contains essential user information for the PL-SBOX-22" Panel Light Softbox. We recommend reading it thoroughly before using the equipment and keeping it safe for future reference.

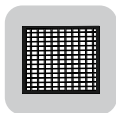

Features

1. All-in-one softbox with built-in elastic band, allowing users to quickly mount the softbox onto lights. The softbox can be easily switched between with or without barn doors, significantly improving shooting efficiency.
2. The body of the softbox is made of reflective Oxford cloth, providing superior diffusion and reflection efficiency with its optical fiber construction. This results in a more uniform and soft reflection effect.
3. The standard grid is equipped with directional light distribution, which effectively restricts the light beam range, achieving more precise light control. Depending on different light control requirements, the soft light cloth and grid can be freely switched to adjust the beam angle.
